<b>Year 11 Topic</b>	<b>Recap COMP 1 Topics Programming project</b>	<b>Ethical, legal, cultural and environmental concerns Programming project &amp; Flowcharts/algorithms</b>	<b>Programming project &amp; Problem Techniques Data Representation Problem solving using pseudo code</b>	<b>Programming project &amp; Problem Solving Translators &amp; Facilities Computational logic</b>	<b>Revision/ Past Papers</b>	<b>Revision / Past Papers</b>
<b>I am learning about:</b>	We learn how to identify and use variables, operators, inputs, outputs and assignments <ul style="list-style-type: none"> <li>• how to understand and use the three basic programming constructs used to control the flow of a program: Sequence; Selection; Iteration</li> <li>• how to understand and use suitable loops including count and condition controlled loops</li> <li>• how to use different types of data, including</li> </ul>	We learn how to investigate and discuss Computer Science technologies while considering: <ul style="list-style-type: none"> <li>- ethical issues</li> <li>- legal issues</li> <li>- cultural issues</li> <li>- environmental issues.</li> <li>- privacy issues.</li> <li>• how key stakeholders are affected by technologies</li> <li>• environmental impact of Computer Science</li> <li>• cultural implications of Computer Science</li> </ul>	We learn how to design suitable algorithms to represent the solution to a problem <ul style="list-style-type: none"> <li>• how to design suitable input and output formats and navigation methods for their system</li> <li>• how to identify suitable variables and structures with appropriate validation for their system</li> <li>• how to use appropriate data types in their system</li> <li>• how to use</li> </ul>	Learn how how to develop a solution to the identified problem using a suitable programming language(s) <ul style="list-style-type: none"> <li>• how to demonstrate testing and refinement of the code during development</li> <li>• how to explain the solution using suitable annotation and evidence of development</li> <li>• how to use suitable techniques to solve all aspects of the problem</li> </ul>	Revise all topics for both COMP 1 paper and COMP 2 paper	Revise all topics for both COMP 1 paper and COMP 2 paper

	<p>Boolean, string, integer and real, appropriately in solutions to problems</p> <ul style="list-style-type: none"> <li>• how to understand and use basic string manipulation</li> <li>• how to understand and use basic file handling operations: <ul style="list-style-type: none"> <li>- open</li> <li>- read</li> <li>- write</li> <li>- close</li> </ul> </li> <li>• how to define and use arrays (or equivalent) as appropriate when solving problems</li> <li>• how to understand and use functions/sub programs to create structured code. We will learn how to analyse and identify the requirements for a solution to the problem</li> <li>• how to set clear objectives that show an awareness of the need for real world utility</li> <li>• how to use abstraction and decomposition to design the solution to a problem</li> <li>• how to identify the data requirements for their system</li> <li>• how to identify test procedures to be used during and after development to check their system against the success criteria</li> </ul>	<ul style="list-style-type: none"> <li>• open source vs proprietary software</li> <li>• legislation relevant to Computer Science: <ul style="list-style-type: none"> <li>- The Data Protection Act 1998</li> <li>- Computer Misuse Act 1990</li> <li>- Copyright Designs and Patents Act 1988</li> <li>- Creative Commons Licensing</li> <li>- Freedom of Information Act 2000</li> </ul> </li> </ul> <p>Learn about Flow charts like pseudocode are informal but the most common flow chart shapes are: Line An arrow represents control passing between the connected shapes. Process This shape represents something being performed or done. Sub Routine This shape represents a subroutine call that will relate to a separate, non-linked flow chart Input/Output This shape represents the input or output of something into or out of the flow chart. Decision This shape represents a decision (Yes/No or True/False) that results in two lines representing the different possible outcomes. Terminal This shape represents the "Start" and "End" of the process.</p>	<p>functions/sub programmes to produce structured reusable code</p> <ul style="list-style-type: none"> <li>• how to select suitable techniques for the development of the solution.</li> </ul> <p>Learn how Variables and constants are assigned using the = operator. x=3 name="Bob" Variables and constants are declared the first time a value is assigned. They assume the data type of the value they are given. Variables and constants that are declared inside a function or procedure are local to that subroutine. Variables in the main program can be made global with the keyword global. global userid = 123 Variables in the main program can be made constant with the keyword const. const vat = 20</p> <p>Revise how casting Variables can be typecast using the int str and float functions. str(3) returns "3" int("3") returns 3 float("3.14") returns 3.14</p> <p>Outputting to screen print(string) print(variable) Example print("hello") print(myAge) Taking Input from User variable=input(prompt to</p>	<ul style="list-style-type: none"> <li>• how to take a systematic approach to problem solving</li> <li>• how to deploy practical techniques in an efficient and logical manner</li> <li>• how to show an understanding of the relevant information by presenting evidence of the development of their solutions</li> <li>• how to show an understanding of the technical terminology/concepts that arise from their investigation through analysis of the data collected</li> <li>• how to use the terminology/concepts surrounding their topic and contained in the information collected correctly when it comes to producing analysis in the supporting script.</li> </ul> <p>We learn how to produce a full report covering all aspects of the investigation</p> <ul style="list-style-type: none"> <li>• how to present the information in a clear form which is understandable by a third party and which is easily navigatable</li> <li>• how to critically appraise the evidence that they have presented</li> <li>• how to test their own solution</li> </ul>		
--	---	---	--	--	--	--

	<ul style="list-style-type: none"> <li>• how to use validation to ensure a robust solution to a problem.</li> </ul>		user) Example name=input("Please enter your name")	<ul style="list-style-type: none"> <li>• how to present their evaluation in a relevant, clear, organised, structured and coherent format</li> <li>• how to use specialist terms correctly and appropriately</li> <li>• how to present a conclusion to the report</li> <li>• how to justify their conclusions based on the evidence provided.</li> </ul>
